

[CO-LOCATION]

The ideal business hosting solution

Performance and flexibility at a fraction of the cost

Co-location is an ideal solution for organizations that want to own and maintain their hardware without making a significant investment in network infrastructure and physical security.

Co-location enables your business to focus on its core competencies while partnering with a organization that provides superior connectivity, secure facilities and the technical support needed to be successful in the digital economy.

State-of-the-art data centre

Internet Light and Power has made tremendous investments in our facilities to ensure your investment is protected 24 hours a day, 7 days a week.

- 24x7 monitoring of connection and selected services
- Physical and electronic security measures
- Uninterrupted UPS power support 130 KW Power Generator
- Complete climate control system

High-Speed Access

By housing your servers in Internet Light and Power's facilities your organization can take advantage of our multi-tiered connections to the Internet in order to ensure speed and reliability of your Internet connection.
