

## [ ILAP Network QUB ]

Your business depends on the Internet. Downtime costs money, time and valuable resources. The ILAP Network QUB (Quality Uninterrupted Bandwidth) is a state of the art access solution that provides organizations with unparalleled uptime by fully automating the failover process between multiple local loop providers.

Most network failures occur due to local loop issues. The ILAP Network QUB was designed to eliminate these failures by building in the highest level of redundancy possible. Redundant circuits and routers are the backbone of the Network QUB. This provides a stable and reliable connection and helps reduce technical support time required to manage the solution.

### FEATURES & BENEFITS

#### Features:

- Multiple local loop providers
- Redundant circuits
- Automated circuit failover
- Redundant network QUB routers
- Network path diversity
- Lower monthly circuit pricing
- No IP address changes
- No DNS resource changes

#### Benefits:

- Increased reliability
- Increased speeds
- Lower costs
- Reduced support requirements
- Simple maintenance requirements
